**Abstract**

PCT No. PCT/EP84/00165 Sec. 371 Date Feb. 1, 1985 Sec. 102(e) Date Feb. 1, 1985 PCT Filed May 29, 1984 PCT Pub. No. WO84/04960 PCT Pub. Date Dec. 20, 1984. Device intended to determine whether two shafts arranged one behind the other are aligned or parallel or whether they are offset with a certain angle. The device employs a light beam S, S' and a mirror prism (6) or any other optical system and displays separately the alignment errors directly as a function of the parallel displacement and of the angular displacement. It may be used to align shafts and/or monitor permanently the alignment state of the shafts (3, 4).
